

Case Study

Sector:	Airports
Client:	Mace Group for Heathrow Airport Limited (HAL)
Location:	Terminal 3, Heathrow, London
Duration:	2 years (completion Dec 2017)
Services:	Full replacement of Fire & PAVA systems architecture

“Trinity are a pleasure to manage contractually and their account management impeccable. Nothing is ever too much for them to take a look at and nothing gets left for the ‘too hard to resolve’ pile. I would personally recommend the services of Trinity to any company looking for fire protection”

**Facilities Manager
Heathrow Terminal 3**

Project Overview

The project methodology has been designed to replace the whole system out of hours whilst keeping a fully working system 24/7, thus giving zero operational impact to Heathrow and its passengers. All installation and commissioning takes place at night, including the replacement of 11000 devices and integration into a new full fibre network backbone. Currently the project is running ahead of schedule and has been awarded Mace Aviation’s top performing project for 2016
