

## Case Study

<b>Sector:</b>	Facility Management
<b>Client:</b>	Derwent FM
<b>Location:</b>	Hertfordshire
<b>Duration:</b>	Ongoing Planned and Preventative Maintenance
<b>Services:</b>	Fire Detection Systems CCTV

*“Trinity have been the incumbent Service provider for the University of Hertfordshire accommodation and sports blocks for a number of years.*

*I have always found the service provided to be of a high standard and their depth of engineering knowledge provides confidence with regards to the complicated Gent network”*

**Facility Management  
Hard Services Manager  
Derwent FM**

### Project Overview

The University of Hertfordshire has been delivering 1<sup>st</sup> class higher education since 1941 and is fast approaching its 25 year anniversary as a University. The University has now developed into the UK's leading business-facing university.

Trinity Fire & Security Systems have provided the Planned and Preventative Maintenance for the Fire Detection & CCTV systems within the accommodation and sports blocks since 2006. The Fire Alarm system alone consists of a large, and complex, network incorporating 22 Gents fire alarm panels.

In addition to the ongoing routine and reactive works Trinity have also completed a large phased upgrade of the older style fire detection devices throughout the buildings as part of our commitment to work with the client to manage their false alarms, whilst ensuring total compliancy across the University.
