BREAKING THE CODE: FIRE SAFETY IN THE NHS

The impact on the requirements of the provision of a fire detection system within NHS healthcare premises, in light of the NHS Firecode HTM 05-02, British Standards and Codes of Practice.

Duration - 1.5 hours

Who should attend - Health Estates Fire Officers, Fire system designers, consultants and contractors involved in NHS fire designs and specifications

External Approval - CPD Service

Course details

This seminar details the effect on the requirements of the provision of a Fire detection system within NHS healthcare premises, in light of current Legislation, British Standards and Codes of Practice.

This seminar provides guidance on the design and installation of new fire detection and alarm systems for NHS healthcare premises. It highlights the requirements that are detailed in the NHS Firecode HTM 05-02 in addition to those required by BS 5839-1 2002.

The seminar considers the means by which the new Firecode requirements for measures to reduce unwanted fire alarms, a site-wide fire safety strategy and specific evacuation procedures can be applied.

Finally the seminar will cover the importance of 3rd party accreditation schemes in the industry for products and services.

Certificates of completion are awarded to attendees completing the course.
