PLAYING WITH FIRE

A look at the provision of a new fire alarm system and why many do not comply to the latest standards.

Duration - 1 hour

Who should attend - M&E Consultants, End Users, Architects or anyone involved in the process of providing or maintaining an automatic fire detection system

External Approval - CIBSE, CPD Service, IEI

Course details

This presentation concentrates on the process in the provision of a new fire alarm system and examines the reasons why over 90% of systems installed today do not comply to the current British Standard. In reality 90% of current Fire Certificates are not worth the paper they are written on.

This is a potentially contentious presentation that raises some alarming issues within the current practice of supplying a fire alarm system.

It is a good starting point for anyone who is planning to provide a fire detection system to ensure the mistakes of the past are not repeated.

It discusses the benefits of the two Quality Assurance schemes that exist today and how an individual and/or organisation can attain third party accreditation as a supplier of a new fire system for the protection of life and property from fire.

Certificates of completion are awarded to attendees completing the course.
