

A healthcare professional in a white coat is using a tablet computer. In the foreground, a stethoscope and medical charts are visible on a desk.

Increasing Efficiency of Fire Alarm Systems in a Healthcare Environment

Duration

1 Hour

Who should attend

M&E Consultants, End Users, Architects or anyone involved in the process of designing, providing or maintaining an automatic fire detection system.

Course details

This course will provide an explanation of general and healthcare specific Health Technical Memoranda code, fire standards; including an analysis of the causes, costs and solutions to false alarms. The course will provide an in depth overview of how technology and software has been developed specifically to address and help provide a solution to manage false alarms better and improve efficiency of fire alarm systems. There will be a brief introduction into a single system solution for the future with a specific focus on healthcare.
