

Open and Closed Managed Protocols Explained

Duration

1 Hour

Who should attend

M&E Consultants, End Users, Architects or anyone involved in the process of designing, providing or maintaining an automatic fire detection system.

Course details

This CPD session will provide a detailed overview of the flexibility of addressable systems design and the advantages of a protocol controlled system. Learners will developed a detailed understanding of the advantages and disadvantages of addressable and conventional systems. The session will give an in depth understanding of protocol and provide a focused understanding of EN54 Part 13 certification requirements effecting decisions between open and closed protocol systems. The session will also cover installation guidelines effecting choices between an open and closed protocol managed system and give an overview of real world considerations to take into account when making the selection.
